

# CRC Cards (Class-Responsibility-Collaboration Cards)

CRC cards are a design tool used in object-oriented software design. Here are some important features:

- A **class** makes a blueprint for **objects** of that class-type and is usually described by a noun (eg. point, rectangle, playing card, song, etc)
- A class also has **responsibilities** (i.e. both things it must remember and things it can do.)
  - **a class variable** is a thing a class must remember which WILL NOT change during a particular instance life. These are defined in the class scope, but do not start with `self`.
  - **an instance variable** is a thing a class must remember which MAY change from instance to instance, but which must be remembered between instance calls. In Python, these typically begin with `self`. (e.g., `self.x` in the Point class).
  - **a method** implements a single action or a single operation which the class can undertake. Typically, these change the state of the object in some way.
- A class may or may not rely on **collaborations** with other classes. (e.g., A playing card may be a member of a deck class, a student is a person, and a person may be a member of an organization.)

Below are two cards:

1. a sample CRC card
2. a blank CRC card for you to use as a template.

# CRC Example

Below is an example of the CRC card for [point.py](#)

Open `point.py` in PyCharm, so you can compare the code with the CRC design.

Class name: Point	
Class Attributes:	Class Collaborations (other classes):
<ul style="list-style-type: none"><li>• <code>self.x</code>        # instance variable which holds the x value</li><li>• <code>self.y</code>        # instance variable which holds the y value</li><li>• <code>self.turtle</code>    # instance variable which is initially set to <code>None</code> until <code>draw_point()</code> is called.</li></ul>	<ul style="list-style-type: none"><li>• Turtle class</li></ul>
Class Methods:	Class Collaborations (other classes):
<ul style="list-style-type: none"><li>• <code>__init__()</code>:<ul style="list-style-type: none"><li>◦ Creates a new point at x, y. If no x, y are given, the point is created at (0, 0)</li></ul></li><li>• <code>__str__()</code>:<ul style="list-style-type: none"><li>◦ Makes the <code>str()</code> function work with Points.</li></ul></li><li>• <code>distance_from_origin()</code>:<ul style="list-style-type: none"><li>◦ Function to compute a Point's distance from the origin.</li></ul></li><li>• <code>user_set()</code>:<ul style="list-style-type: none"><li>◦ Allows the user to change the x and y value of a Point.</li></ul></li><li>• <code>draw_point()</code>:<ul style="list-style-type: none"><li>◦ Instantiates a Turtle object and draws the Point on the Screen.</li></ul></li></ul>	<ul style="list-style-type: none"><li>• Turtle class</li></ul>

The above CRC card and the `point.py` code are matched.

## Blank CRC Card

<b>Class name:</b> Student	
<b>Class Attributes:</b>	<b>Class Collaborations (other classes):</b>
<ul style="list-style-type: none"><li>• self.pin = self.retrieve_pin()</li><li>• self.name = self.retrieve_name()</li></ul>	<ul style="list-style-type: none"><li>•</li></ul>
<b>Class Methods:</b>	<b>Class Collaborations (other classes):</b>
<ul style="list-style-type: none"><li>• <code>__init__()</code>:<ul style="list-style-type: none"><li>◦ Creates a student object and retrieves the values from the database</li></ul></li><li>• <code>retrieve_pin()</code>:<ul style="list-style-type: none"><li>◦ Gets the PIN from the database and returns it</li></ul></li><li>• <code>add_course()</code>:<ul style="list-style-type: none"><li>◦ Adds a course to the database</li></ul></li><li>• <code>remove_cours()</code>:<ul style="list-style-type: none"><li>◦ Removes a course to the database</li></ul></li><li>• <code>retrieve_courses()</code>:<ul style="list-style-type: none"><li>◦ Returns a list of courses from the database</li></ul></li></ul>	<ul style="list-style-type: none"><li>• Courses class</li></ul>
